

Amendments to the Specification

Please replace the paragraph beginning at page 7, line 19, with the following rewritten paragraph:

Driver circuit 121 drives display part 108 and second display part 111. Loudspeaker 109, display part 108, second display part 111 and back light 120 of second housing 102 are connected to main body substrate 113 with flexible substrate 122 whose tip part is divided, and are controlled by entire control part ~~115-116~~ provided on main body substrate 113.

Please replace the paragraph beginning at page 9, line 26, with the following rewritten paragraph:

Furthermore, since side face keys 107 together with ten keys 104 are mounted on main body substrate 113 in first housing 101 so as to be used as a soft key, unlike the already described ~~patent document 1 Japanese Patent Unexamined Publication No. 2003-110675~~, it is not necessary that soft keys and printed board are added to the second housing in addition to key operation part such as ten keys in the first housing.

Please replace the paragraph beginning at page 11, line 25, with the following rewritten paragraph:

Fig. 8 is a view showing a state in which soft key icons, position information and operation types of side face keys are displayed on second display part 311 of foldable portable telephone device 300 in accordance with a third exemplary embodiment of the present invention. Fig. 8 shows three soft key icons 312, 313 and 314 and next to each soft key icon, three frames showing an entire layout of the soft keys and position information 315 in which the position of the corresponding side face key is colored in black.
